*Chemistry and Physics of Lipids*, 60 (1992) 289–291
Elsevier Scientific Publishers Ireland Ltd.

# Subject Index

## Volume 60 (1992)

(all-*cis*)-6,9,12,15-octadecatetraenoic acid, polyunsaturated fatty acids, fish oils, seed oils, 273
alky-ω-hydroxy-carboxylic acids, deuterium, branched, fatty acids, 21
alkylphosphoinositol, lysophosphatidylinositol, phosphoinositol, optical purity, synthesis, phosphoramidite, 253
alpha-tocopherol, vitamin E, phospholipid acyl chain unsaturation, spin label ESR, order and fluidity, membrane stabilization, 29
arachidonic acid, PI synthase, CMP-morpholidate, PI-specific phospholipase C, liposomes, 83
autoxidation, ethoxyquin, ethoxyquin oxidation products, fish meal, ethoxyquin dimer, 2,6-dihydro-2,2,4-trimethyl-6-quinone imine, 263
avocado, lipids, unsaponifiable, gas-chromatography, 133

bilayer organization, fluorescent phospholipids, lipid segregation, melittin, 235
bile acids, bile acid sequestrants, $^{13}$C-NMR, spin labelled fatty acids, 143
bile acid sequestrants, bile acids, $^{13}$C-NMR, spin labelled fatty acids, 143
binary lipid mixtures, FTIR, phase transition, contour map, 119
branched, deuterium, fatty acids, alky-ω-hydroxy-carboxylic acids, 21

cell association, gangliosides, long chain bases, cerebellar granule cells, metabolism, 247
cerebellar granule cells, gangliosides, long chain bases, metabolism, cell association, 247
chemical synthesis, platelet-activating factor (PAF) species, human platelet aggregation, 77
cholesterol, 15-oxygenated sterols, inhibitors of sterol synthesis, 61
cholesterol, phospholipid, phase diagram, phase transition, interdigitated phase, 153
chromogenic, phosphatidylinositol, substrate analogue, phospholipase C, enzyme assay, 4-nitrophenol, 101
CMP-morpholidate, PI synthase, PI-specific phospholipase C, liposomes, arachidonic acid, 83
$^{13}$C-NMR, bile acids, bile acid sequestrants, spin labelled fatty acids, 143
$^{13}$C-NMR, conjugated, diacetylenic, fatty ester, synthesis, 179
conjugated, diacetylenic, fatty ester, synthesis, $^{13}$C-NMR, 179
contour map, FTIR, phase transition, binary lipid mixtures, 119
cooperative unit, monolayers, phosphatidic acids, ether analogue, differential scanning calorimetry, transition temperature, enthalpy, entropy, 209
cryoprotector, proline, lipid bilayer, phase transition, inverted hexagonal phase, Hofmeister effect, 51

deuterium, branched, fatty acids, alky-ω-hydroxy-carboxylic acids, 21
deuterium-labeled tracer, linoleic acid, methylene-interrupted dienoic fatty acids, double-bond positions, dimethyl disulfide adducts, GC-MS, rapeseed oil, 39
diacetylenic, conjugated, fatty ester, synthesis, $^{13}$C-NMR, 179
differential scanning calorimetry, monolayers, phosphatidic acids, ether analogue, transition temperature, enthalpy, entropy, cooperative unit, 209
2,6-dihydro-2,2,4-trimethyl-6-quinone imine, ethoxyquin, ethoxyquin oxidation products, autoxidation, fish meal, ethoxyquin dimer, 263
dimethyl disulfide adducts, linoleic acid, methylene-interrupted dienoic fatty acids, double-bond positions, GC-MS, rapeseed oil, deuterium-labeled tracer, 39
diol phospholipids, hexamethylphosphorus triamide, transamidation, steroids, thiosphosphates, phosphates, 15
double-bond positions, linoleic acid, methylene-interrupted dienoic fatty acids, dimethyl disulfide adducts, GC-MS, rapeseed oil, deuterium-labeled tracer, 39

efficiency of solute entrapment, phospholipid vesicles, freeze-thaw extrusion, 201
entropy, monolayers, phosphatidic acids, ether analogue, differential scanning calorimetry, transition temperature, enthalpy, cooperative unit, 209
enzymatic esterification, glyceryl esters, lipases, lipid synthesis, regioselective esterification, stereoselective esterification, 189
enzymes, phospholipid vesicles, oxidation, phosphatidylcholine, phosphatidylglycerol, glutathione peroxidase, 93
enzyme assay, phosphatidylinositol, substrate analogue, phospholipase C, chromogenic, 4-nitrophenol, 101
epoxy fatty acid, lipoxygenase, fatty acid oxidation, ketoacid, furanoid fatty acid, 225
ether analogue, monolayers, phosphatidic acids, differential scanning calorimetry, transition temperature, enthalpy, entropy, cooperative unit, 209
ethoxyquin, ethoxyquin oxidation products, autoxidation, fish meal, ethoxyquin dimer, 2,6-dihydro-2,2,4-trimethyl-6-quinone imine, 263
ethoxyquin dimer, ethoxyquin, ethoxyquin oxidation products, autoxidation, fish meal, 2,6-dihydro-2,2,4-trimethyl-6-quinone imine, 263

ethoxyquin oxidation products, ethoxyquin, autoxidation, fish meal, ethoxyquin dimer, 2,6-dihydro-2,2,4-trimethyl-6-quinone imine, 263

fatty acids, deuterium, branched, alky-ω-hydroxy-carboxylic acids, 21
fatty acid oxidation, epoxy fatty acid, lipoxygenase, ketoacid, furanoid fatty acid, 225
fatty ester, conjugated, diacetylenic, synthesis, $^{13}$C-NMR, 179
fish meal, ethoxyquin, ethoxyquin oxidation products, autoxidation, ethoxyquin dimer, 2,6-dihydro-2,2,4-trimethyl-6-quinone imine, 263
fish oils, polyunsaturated fatty acids, seed oils, (all-*cis*)-6,9,12,15-octadecatetraenoic acid, 273
fluorescence anisotropy, pulmonary surfactant, SP-B peptides, surface activity, 163
fluorescence quenching, fluorescence spectroscopy, fluorescent probes, lipid 'fluidity', lipoproteins, 1
fluorescence spectroscopy, fluorescence quenching, fluorescent probes, lipid 'fluidity', lipoproteins, 1
fluorescent phospholipids, bilayer organization, lipid segregation, melittin, 235
fluorescent probes, fluorescence quenching, fluorescence spectroscopy, lipid 'fluidity', lipoproteins, 1
freeze-thaw extrusion, phospholipid vesicles, efficiency of solute entrapment, 201
FTIR, phase transition, binary lipid mixtures, contour map, 119
furanoid fatty acid, epoxy fatty acid, lipoxygenase, fatty acid oxidation, ketoacid, 225

gangliosides, ganglioside lactones, ganglioside aggregates, light scattering, phase separation, 111
gangliosides, long chain bases, cerebellar granule cells, metabolism, cell association, 247
ganglioside aggregates, gangliosides, ganglioside lactones, light scattering, phase separation, 111
ganglioside lactones, gangliosides, ganglioside aggregates, light scattering, phase separation, 111
gas-chromatography, avocado, lipids, unsaponifiable, 133
gas chromatography, Δ5 unsaturated fatty acids, iodolactones, mass spectrometry, 71
GC-MS, linoleic acid, methylene-interrupted dienoic fatty acids, double-bond positions, dimethyl disulfide adducts, rapeseed oil, deuterium-labeled tracer, 39
glutathione peroxidase, phospholipid vesicles, oxidation, phosphatidylcholine, phosphatidylglycerol, enzymes, 93
glyceryl esters, enzymatic esterification, lipases, lipid synthesis, regioselective esterification, stereoselective esterification, 189

hexamethylphosphorus triamide, transamidation, steroids, diol phospholipids, thiosphosphates, phosphates, 15
Hofmeister effect, proline, lipid bilayer, phase transition, cryoprotector, inverted hexagonal phase, 51
human platelet aggregation, platelet-activating factor (PAF) species, chemical synthesis, 77

inhibitors of sterol synthesis, 15-oxygenated sterols, cholesterol, 61
interdigitated phase, phospholipid, cholesterol, phase diagram, phase transition, 153
inverted hexagonal phase, proline, lipid bilayer, phase transition, cryoprotector, Hofmeister effect, 51
iodolactones, Δ5 unsaturated fatty acids, gas chromatography, mass spectrometry, 71

ketoacid, epoxy fatty acid, lipoxygenase, fatty acid oxidation, furanoid fatty acid, 225

light scattering, gangliosides, ganglioside lactones, ganglioside aggregates, phase separation, 111
linoleic acid, methylene-interrupted dienoic fatty acids, double-bond positions, dimethyl disulfide adducts, GC-MS, rapeseed oil, deuterium-labeled tracer, 39
lipases, enzymatic esterification, glyceryl esters, lipid synthesis, regioselective esterification, stereoselective esterification, 189
lipid, membrane, phase transition, quenching of fluorescence, melittin, 127
lipids, avocado, unsaponifiable, gas-chromatography, 133
lipid 'fluidity', fluorescence quenching, fluorescence spectroscopy, fluorescent probes, lipoproteins, 1
lipid bilayer, proline, phase transition, cryoprotector, inverted hexagonal phase, Hofmeister effect, 51
lipid segregation, bilayer organization, fluorescent phospholipids, melittin, 235
lipid synthesis, enzymatic esterification, glyceryl esters, lipases, regioselective esterification, stereoselective esterification, 189
lipoproteins, fluorescence quenching, fluorescence spectroscopy, fluorescent probes, lipid 'fluidity', 1
liposomes, PI synthase, CMP-morpholidate, PI-specific phospholipase C, arachidonic acid, 83
lipoxygenase, epoxy fatty acid, fatty acid oxidation, ketoacid, furanoid fatty acid, 225
long chain bases, gangliosides, cerebellar granule cells, metabolism, cell association, 247
lysophosphatidylinositol, alkylphosphoinositol, phosphoinositol, optical purity, synthesis, phosphoramidite, 253

mass spectrometry, Δ5 unsaturated fatty acids, iodolactones, gas chromatography, 71
melittin, bilayer organization, fluorescent phospholipids, lipid segregation, 235
melittin, membrane, lipid, phase transition, quenching of fluorescence, 127
membrane, lipid, phase transition, quenching of fluorescence, melittin, 127
membrane stabilization, alpha-tocopherol, vitamin E, phospholipid acyl chain unsaturation, spin label ESR, order and fluidity, 29
metabolism, gangliosides, long chain bases, cerebellar granule cells, cell association, 247
methylene-interrupted dienoic fatty acids, linoleic acid, double-bond positions, dimethyl disulfide adducts, GC-MS, rapeseed oil, deuterium-labeled tracer, 39

monolayers, phosphatidic acids, ether analogue, differential scanning calorimetry, transition temperature, enthalpy, entropy, cooperative unit, 209

4-nitrophenol, phosphatidylinositol, substrate analogue, phospholipase C, chromogenic, enzyme assay, 101

optical purity, lysophosphatidylinositol, alkylphosphoinositol, phosphoinositol, synthesis, phosphoramidite, 253
order and fluidity, alpha-tocopherol, vitamin E, phospholipid acyl chain unsaturation, spin label ESR, membrane stabilization, 29
oxidation, phospholipid vesicles, phosphatidylcholine, phosphatidylglycerol, enzymes, glutathione peroxidase, 93
15-oxygenated sterols, cholesterol, inhibitors of sterol synthesis, 61

phase diagram, phospholipid, cholesterol, phase transition, interdigitated phase, 153
phase separation, gangliosides, ganglioside lactones, ganglioside aggregates, light scattering, 111
phase transition, FTIR, binary lipid mixtures, contour map, 119
phase transition, membrane, lipid, quenching of fluorescence, melittin, 127
phase transition, phospholipid, cholesterol, phase diagram, interdigitated phase, 153
phase transition, proline, lipid bilayer, cryoprotector, inverted hexagonal phase, Hofmeister effect, 51
phosphates, hexamethylphosphorus triamide, transamidation, steroids, diol phospholipids, thiosphosphates, 15
phosphatidic acids, monolayers, ether analogue, differential scanning calorimetry, transition temperature, enthalpy, entropy, cooperative unit, 209
phosphatidylcholine, phospholipid vesicles, oxidation, phosphatidylglycerol, enzymes, glutathione peroxidase, 93
phosphatidylglycerol, phospholipid vesicles, oxidation, phosphatidylcholine, enzymes, glutathione peroxidase, 93
phosphatidylinositol, substrate analogue, phospholipase C, chromogenic, enzyme assay, 4-nitrophenol, 101
phosphoinositol, lysophosphatidylinositol, alkylphosphoinositol, optical purity, synthesis, phosphoramidite, 253
phospholipase C, phosphatidylinositol, substrate analogue, chromogenic, enzyme assay, 4-nitrophenol, 101
phospholipid, cholesterol, phase diagram, phase transition, interdigitated phase, 153
phospholipid acyl chain unsaturation, alpha-tocopherol, vitamin E, spin label ESR, order and fluidity, membrane stabilization, 29
phospholipid vesicles, efficiency of solute entrapment, freeze-thaw extrusion, 201
phospholipid vesicles, oxidation, phosphatidylcholine, phosphatidylglycerol, enzymes, glutathione peroxidase, 93
phosphoramidite, lysophosphatidylinositol, alkylphosphoinositol, phosphoinositol, optical purity, synthesis, 253
PI-specific phospholipase C, PI synthase, CMP-morpholidate, liposomes, arachidonic acid, 83
PI synthase, CMP-morpholidate, PI-specific phospholipase C, liposomes, arachidonic acid, 83

platelet-activating factor (PAF) species, chemical synthesis, human platelet aggregation, 77
polyunsaturated fatty acids, fish oils, seed oils, (all-*cis*)-6,9,12,15-octadecatetraenoic acid, 273
proline, lipid bilayer, phase transition, cryoprotector, inverted hexagonal phase, Hofmeister effect, 51
pulmonary surfactant, fluorescence anisotropy, SP-B peptides, surface activity, 163

quenching of fluorescence, membrane, lipid, phase transition, melittin, 127

rapeseed oil, linoleic acid, methylene-interrupted dienoic fatty acids, double-bond positions, dimethyl disulfide adducts, GC-MS, deuterium-labeled tracer, 39
regioselective esterification, enzymatic esterification, glyceryl esters, lipases, lipid synthesis, stereoselective esterification, 189

seed oils, polyunsaturated fatty acids, fish oils, (all-*cis*)-6,9,12,15-octadecatetraenoic acid, 273
SP-B peptides, pulmonary surfactant, fluorescence anisotropy, surface activity, 163
spin labelled fatty acids, bile acids, bile acid sequestrants, $^{13}C$-NMR, 143
spin label ESR, alpha-tocopherol, vitamin E, phospholipid acyl chain unsaturation, order and fluidity, membrane stabilization, 29
stereoselective esterification, enzymatic esterification, glyceryl esters, lipases, lipid synthesis, regioselective esterification, 189
steroids, hexamethylphosphorus triamide, transamidation, diol phospholipids, thiosphosphates, phosphates, 15
substrate analogue, phosphatidylinositol, phospholipase C, chromogenic, enzyme assay, 4-nitrophenol, 101
surface activity, pulmonary surfactant, fluorescence anisotropy, SP-B peptides, 163
synthesis, conjugated, diacetylenic, fatty ester, $^{13}C$-NMR, 179
synthesis, lysophosphatidylinositol, alkylphosphoinositol, phosphoinositol, optical purity, phosphoramidite, 253

thiosphosphates, hexamethylphosphorus triamide, transamidation, steroids, diol phospholipids, phosphates, 15
transamidation, hexamethylphosphorus triamide, steroids, diol phospholipids, thiosphosphates, phosphates, 15
transition temperature, enthalpy, monolayers, phosphatidic acids, ether analogue, differential scanning calorimetry, entropy, cooperative unit, 209

unsaponifiable, avocado, lipids, gas-chromatography, 133
$\Delta 5$ unsaturated fatty acids, iodolactones, gas chromatography, mass spectrometry, 71

vitamin E, alpha-tocopherol, phospholipid acyl chain unsaturation, spin label ESR, order and fluidity, membrane stabilization, 29
